

Add Question Library Elements to Your Survey

Once you have [added or created questions and/or pages within the Question Library](#), you can begin to add these elements to your survey. Follow the below steps to do so:

1. At the bottom of any page in your survey (except the Thank You page) you can click the option to **Add New From Library**. You also have an **Insert from Library** link between pages. These work similarly, the difference being if you insert Question Library elements that are made up of questions only via the between-page tool, they will be added to their own page. Whereas, if you use the on-page tool they will be added to that page.
2. In the Question Library panel, the list of elements will default to all Question Library elements. If you are using [folders to organize your questions](#) you can filter your list of questions by selecting the folder from the dropdown menu.
3. Select the element/s you wish to add to the survey (you can insert more than one!) and click **Save Question(s) and Edit**.

In our above example we selected the *Demographic Questions* element from the Question Library. This element contains 2 pages and 7 questions. As a result, the 2 pages that contain the 7 demographic questions have been added to the survey.
