

Alchemer Release Notes: January 25, 2022

Below is this week's log of fixes and improvements:

Improvements

[Update] – Implemented changes so that SSL certificates go through a validation step. We now display an error message to users if the domain SSL certificate setup is incorrect.

[Update] – Added frontend host validation functionality for SMTP host and port when creating new SMTP integrations for customers sending from a custom email server. We now display additional error messaging to customers if their email SSL certificate setup is incorrect, and they are unable to proceed until their certificate passes validation.

[Update] – Implemented changes where new Alchemer users or users who have not utilized email actions or campaigns must request permission from support to send emails via email actions and email campaigns. Users must populate a request form to gain approval for the email sending features in the platform. Click [here](#) for more details.

If you have any questions, please [contact our Alchemer Support Team!](#)
