Alchemer Release Notes: September 29, 2022

New Features

You can now integrate Alchemer with Microsoft Teams! This integration is available to customers on an Enterprise Platform.

The Microsoft Teams integration allows you to send data from your Alchemer surveys to Microsoft Teams channels.

It sends real-time, customized messages to those that can take action or conduct analysis — accelerating your time to action on feedback and preventing valuable data from slipping through the cracks.

You can also add card actions to the message that connect back to Alchemer— making it easier to collaborate on the build, test new projects before launch, and monitor project progress. Learn More

Fixes

[Fix] – Changes are saved appropriately within the monthly dropdown menu when scheduling recurring reports. Learn more

[Fix] – Share report links appropriately start with HTTPS rather than HTTP when indicated. Learn more

[Fix] – Changes made so users can log in using SSO Login/Login Using Your Identity Provider regardless of device size or browser zoom.

[Fix] – Surveys created using freecaptcha sitekey and secret keys work appropriately. Learn more

[Fix] – Customer ID is now populated correctly in access logs when users import surveys. Learn More
