

Alchemer Survey Slack Integration

Does your team use [Slack](#) as a communication tool? If so, you can now send data from your Alchemer surveys directly to a public slack channel, or to a specific user!

Alchemer's Slack Integration allows you to send a message about survey activity to Slack. This feature is great for allowing your team members to take immediate action on survey responses.

For example, let's say that you have a survey that collects your customers' NPS®. Using the Slack Integration, you can send each NPS® response as a message to a Slack channel monitored by your Customer Service team. When a detractor score comes in, it can be immediately addressed by a service representative.

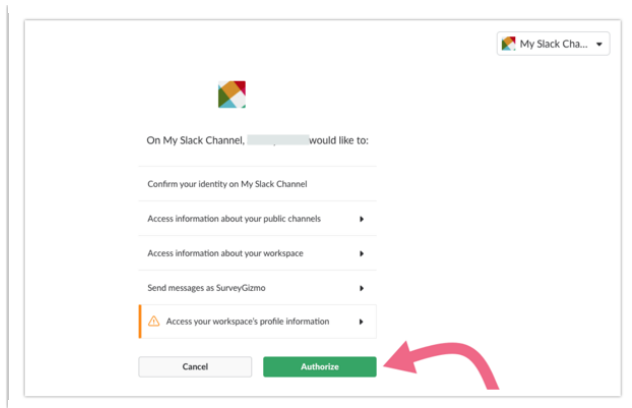

Integrate With Slack

In order to use the Slack Integration, you will first need to connect your Alchemer and Slack accounts. You will need your Alchemer Account Administrator for this part.

Note: The Slack Integration does not allow for posting to private channels; only public channels are supported.

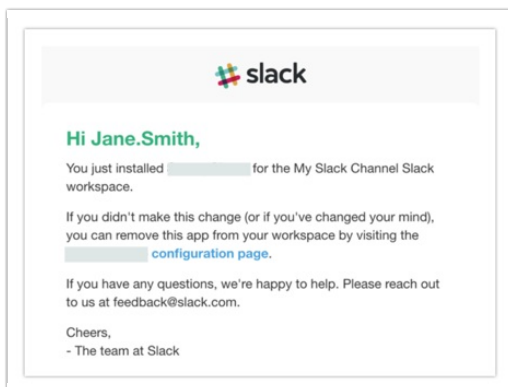

Visit the Slack documentation to learn how to [manage apps for your Slack workspace](#).

1. In Alchemer, navigate to **Integrations > Data Connectors**.
2. The Slack Integration will be available as a **Collaborator level integration**. Click the **Configure** button associated with the Slack Integration.
3. Provide an **Integration Name** in the provided field. This is an internal title that will not be seen by survey respondents nor Slack users.
4. In order for this integration to work, we need to ask Slack for permission to send messages to your workspace. When you click **Save**, you will be redirected to a Slack page asking you to grant Alchemer the permission that it needs.

5. Click **Authorize** to allow Alchemer the access it needs to integrate with your Slack workspace. [Learn why Alchemer needs access to this information and how it's used.](#)

- Once the authorization has been granted, you should see your integration added in your Alchemer account with a **Status** of enabled and a green checkmark in the **Verified** column.
- You will receive an email from Slack informing you that you have installed Alchemer for your Slack workspace. The email will also include instructions for removing the Alchemer app, should you need to do this.

Now that you have connected your Alchemer account to your Slack workspace, read on to learn how to send information from a survey to either a Slack channel or a specific user.

Authorize Alchemer Access to Your Slack Workspace

Alchemer needs access to your Slack workspace to complete the integration set up. Authorization is needed for the following:

- **Access information about your public channels** - Alchemer needs to access information about channels in order to auto-populate a list of channels that the Slack Action can send to.
- **Access information about your workspace** - Alchemer needs to access your team information in order to display which Slack team is associated with an interaction.
- **Send messages as Alchemer** - Alchemer needs authorization in order to post messages to your Slack channel(s) via the Slack Action.
- **Access your workspace's profile information** - Alchemer needs access to your Slack users in

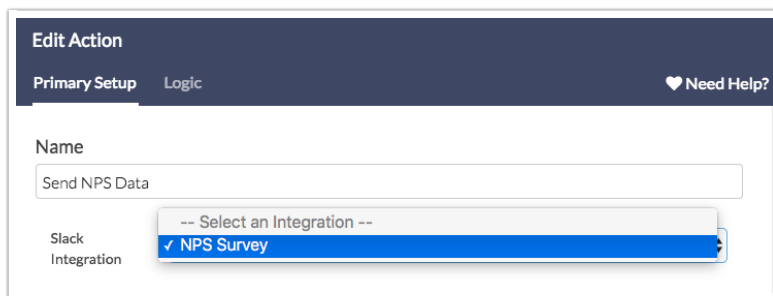

order to auto-populate a list of users that your action can send messages to.

Add Slack Action

In order to send information from a survey to Slack, you will need to add a **Slack Action** to the survey. As a best practice, we recommend that you add this action after you are finished with the survey build.

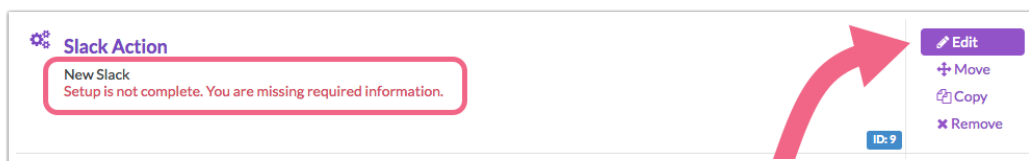

Note: Since your Slack Action will need to use data from survey questions, make sure that you add the action on a page *after* the last question that you want to use!

1. On the survey page where you want to add the action, click **Add New Action**.
2. Locate the **Slack** action in the **Integrations** section and click the corresponding **+ Add** button.
3. Give the action a **Name** (internal) and select the **Slack Integration** from the available dropdown menu (if you have integrated Alchemer with multiple Slack workspaces). Click **Save** to initiate the connection.

The screenshot shows the 'Edit Action' interface. At the top, there are tabs for 'Primary Setup' and 'Logic', and a 'Need Help?' link. The 'Name' field is filled with 'Send NPS Data'. Below it, the 'Slack Integration' dropdown menu is open, showing a list of integrations with 'NPS Survey' selected and marked with a checkmark.

4. Now, click **Edit** on the just-saved Slack action to finish the setup.

The screenshot shows a 'Slack Action' card in a survey. The card has a title 'Slack Action' and a message: 'New Slack Setup is not complete. You are missing required information.' To the right of the card is a menu with options: 'Edit', 'Move', 'Copy', and 'Remove'. A red arrow points from the 'Edit' button to the right.

5. If you need to change the integration that this information will be sent to, select a different integration via the **Slack Integration** dropdown menu.
6. The message can be sent to either a Slack channel or an individual user.
 - To send to a specific channel, type **#** in the **Channel or User** field. Available channels will be auto-suggested; click on the channel that you want to post a message to. You can also use the **Select a Merge Code** tool to merge in the channel name from another part of the survey. The channel name must be in the format of `#channelname`.

Slack Integration: NPS Survey

Channel or User: #

Message: #general, #nps, #random

Select a Merge Code

A red box highlights the 'Channel or User' field. A red arrow points from the '#nps' option in the dropdown menu to the 'Channel or User' field.

- o To send to a specific user, type @ in the **Channel or User** field. Available users will be auto-suggested; click on the user whom you want to notify. You can also use the **Select a Merge Code** tool to merge in the channel name from another part of the survey. The user name must be in the format of @username .

Channel or User: @

Message: @, @, @, @

Select a Merge Code

A red box highlights the '@' symbol in the 'Channel or User' field. A red arrow points from the first '@' option in the dropdown menu to the 'Channel or User' field.

7. Next, you can customize the message content. This is what will be sent to the Slack channel/user when the Alchemer action is fired. Type in your message content or use the **Select a Merge Code** tool to *merge* in survey information, questions answers, etc. (from prior pages) into the message body.

If you want to use Slack emojis in your message, you will need to type in the text shortcut. There are a number of other formatting options available for your Slack message. Visit [Slack's documentation](#) to learn about your formatting options.

Channel or User: #nps

Select a Merge Code

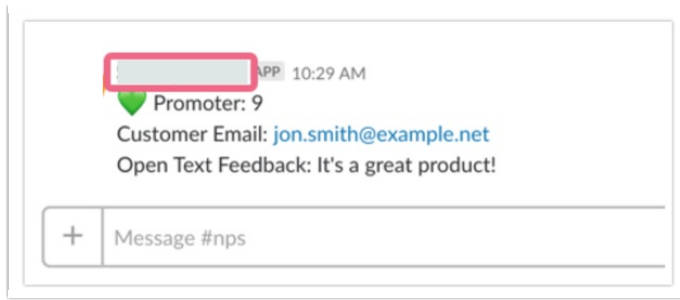

Message: :green_heart: Promoter: [question("value"), id="2"]
Customer Email: [question("value"), id="8"]
Open Text Feedback: [question("value"), id="3"]

Select a Merge Code

A red box highlights the 'Message' field.

8. After you have customized your message content, provide a **Slack Bot Name** in the available field. This will be the name of the sender that appears in Slack.

If “Bot Name” is left empty when configuring a Slack action, a default Bot Name of “Alchemer” will be both used in the sent message and shown in the survey builder and action log.

9. Now that you have provided a Slack Bot Name, you can customize the **Slack Bot Icon**. This will be the icon/image that displays along with the above Slack Bot Name. The following options are available:

- **Use default icon** - this will use Slack's default Slack Bot image.
- **Use a Slack emoji** - use a Slack emoji as the Slack Bot Icon. You will need to input the emoji text into the provided field in the format of `:emojiname:`. *Visit the [Slack documentation to learn about using emoji and emoticons in Slack.](#)*

A screenshot of the 'Slack Bot Icon' configuration form. It has three radio button options: 'Use default icon', 'Use a Slack emoji', and 'Use a custom image'. The 'Use a Slack emoji' option is selected and highlighted with a red box. Below it is a text input field labeled 'Emoji Name' containing the text ':smile:'.

- **Use a custom image** - use a custom image as your Slack Bot Icon. Click on the add image icon to add your image. You can select from images previously uploaded to your File Library, upload one here, or reference the image URL (if externally hosted).

A screenshot of the 'Slack Bot Icon' configuration form. The 'Use a custom image' option is selected and highlighted with a blue dot. Below it is a text input field labeled 'Bot Icon Url'. To the right of the input field is a square button with an image icon, and a large red arrow points to this button.

10. Last, determine when you want to send the Slack message.

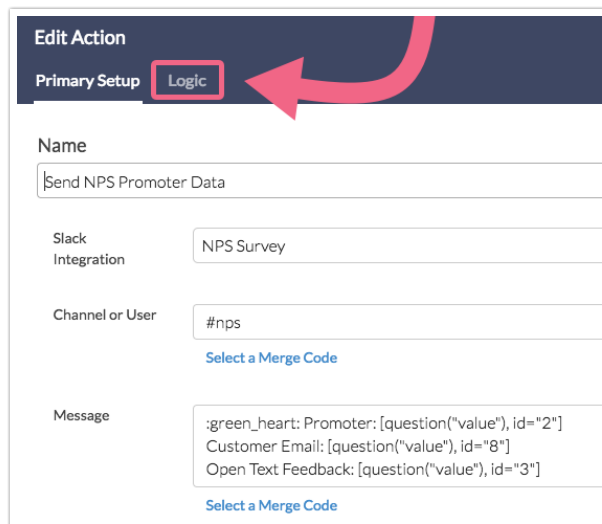

- **Only send once for each response** - this will send the message once for each survey respondent (assuming that the respondent reaches the page that the action has been added to).
- **Send each time this page is rendered** - this will send the message each time a respondent visits the survey page that contains the action. If the respondent navigates back through

the survey, and forward again, the action will trigger again.

11. Once you're finished setting up this Slack message, click **Save!**

Use Logic to Trigger Slack Message

In the event that you need to conditionally trigger a Slack message, you can do so with the use of logic. Click on the **Logic** tab to access the logic builder and create your condition(s). *Visit our [Question Logic documentation](#) to learn more about logic!*

The screenshot shows the 'Edit Action' interface for a Slack message. At the top, there are two tabs: 'Primary Setup' and 'Logic'. The 'Logic' tab is highlighted with a red box, and a red arrow points to it from the right. Below the tabs, the form is divided into several sections:

- Name:** A text input field containing 'Send NPS Promoter Data'.
- Slack Integration:** A dropdown menu with 'NPS Survey' selected.
- Channel or User:** A text input field containing '#nps'. Below it is a link that says 'Select a Merge Code'.
- Message:** A text area containing the following text:

```
:green_heart: Promoter: [question("value"), id="2"]  
Customer Email: [question("value"), id="8"]  
Open Text Feedback: [question("value"), id="3"]
```

Below the text area is a link that says 'Select a Merge Code'.

NPS Example

For example, if you are sending [Net Promoter Score®](#). (NPS) survey data to Slack, you may want to use different messaging, formatting, emojis, etc. for each category of NPS: Promoter, Neutral, and Detractor.

In this case, you will create *three* separate Slack Actions: one action for Promoters, one for Neutrals, and another for Detractors.

You will then want to make sure that each of the actions only triggers for its appropriate scenario. For example, only send the Promoter Slack message if the NPS provided is a 9 or 10.

1. To do this, edit your Slack Action and click on the logic tab to access the logic builder.
2. Check the box to **Only show this action based on answers...**
3. Select your NPS question from the **Select a condition** dropdown and select the 9 and 10 scores.
